SCALE SYLLABUS

Each chord symbol (C7, C-, Co, etc.) represents a series of tones which the improvisor can use when improvising. These series of tones have traditionally been called scales. The scales listed here are the ones I most often hear musicians play. All examples are in the key of C so you can compare the scale construction and similarities.

This SCALE SYLLABUS is intended to give the improvisor a variety of scale choices which can be used over any chord—major, minor, dominant 7th, half diminished and diminished. Western music, especially jazz and pop, uses major, dominant 7th and dorian minor scales and chords more than any other. Scales and chords used less often are the half diminished and diminished. If we agree on these five scale families as being the most predominant, then we can set them up as categories and list substitute scales beneath each heading.

Each category begins with the scale most closely resembling the chord symbol given to the left. The scales are arranged according to the degree of dissonance they produce in relation to the basic chord sound. Scales near the top of each category will sound mild or consonant and scale choices further down the list will become increasingly tense or dissonant. Each player is urged to start with the scales at the top and with practice and experimentation gradually work his way down the list to the more dissonant or tension producing scales. You should work with a new scale sound **on your instrument** until your ears and fingers become comfortable with **all** the tones in the scale. Music is made of tension and release. Scale tones produce tension or they produce relaxation. The improvisors ability to control the amount and frequency of tension and release will in large measure determine whether he is successful in communicating to the listener. Remember—you, the player are also a listener!

Any of the various practice proceedures and patterns listed in Volumes 1, 2 or 3 can be applied to the learning and assimilation of any of the scale choices listed in this SCALE SYLLABUS. Needless to say, any scale you want to learn should be transposed and practiced in all twelve keys. The column on whole and half step construction that I have listed for each scale on the syllabus should prove helpful when transposing a scale to any of the twelve keys.

All of the scales listed in the scale syllabus are listed in the key of C so you can have a frame of reference and can compare the similarities and differences. You are urged to write them in all twelve keys and practice them in all twelve keys.

NOTE: The above chord symbol guide is my system of notation. I feel it best represents the sounds I hear in jazz. The player should be aware that each chord symbol represents a series of tones called a scale. Even though a C7+9 would appear to have only a raised 9th it also has a b9,+4 & +5. The entire C7+9 scale would look like: Root,b9,+9, 3rd,+4,+5,b7 & root (C,Db,D#,E,F#,G#,Bb,C). My chord symbol abbreviation is C7+9 and the name of this scale is Diminished Whole Tone sometimes called Super Locrian or Altered Scale.

C7b9 appears to have only one altered tone (b9) but actually has three: b9, +9, and +4. The entire scale looks like this: Root,b9,+9,3rd,+4,5th,6th,b7, & root (C,Db,D#,E,F#,G,A,Bb,C). This is called a Diminished scale and my chord symbol abbreviation is C7b9.

All scales under the Dominant 7th category are scales that embellish the basic Dominant 7th sound. Some scales provide much more tension than the basic dominant 7th sound and require practice and patience to grasp the essence of their meaning.
